1-needle, Unison-feed, Lockstitch Machine with a Large Hook

DNU-1541
DNU-1541S (with a safety mechanism)
DNU-1541S (with an automatic thread trimmer)

DNU-1541

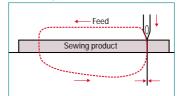

ith its reliable feed and consistent seam quality, the machine responds outstandingly to the sewing of heavy-weight materials.

Excellent sewing capabilities and feed performance.

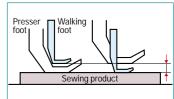

- With its larger needlebar stroke, higher presser foot lift, and newly adopted double-tension mechanism, the machine offers excellent sewing capabilities and responsiveness.
- The alternating vertical movements of the walking foot and presser foot are as large as 6.5mm. In addition, the ratio between alternating vertical movements of the walking foot and presser foot remains unchanged even when the material thickness changes. Thanks to this feature and the adoption of a new method of rectangular feed that prevents needle from fraying, the machine sews multi-layered parts of a material with consistent stitching pitch while preventing stitch gathering.

Rectangular feed

 Compared with the elliptical feed, the rectangular feed helps reduce gathered stitches

Alternating vertical movement mechanism

 The ratio of alternate vertical movement remains unchanged even when the material thickness changes.

· Higher lift of the presser foot

• The maximum alternating vertical movement is 6.5mm.

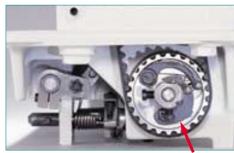

High-speed performance increases productivity.

The machine delivers increased productivity at sewing speeds as high as 2,500rpm (DNU-1541, -1541S) or 3,000rpm (DNU-1541-7).

Safety mechanism. (DNU-1541S)

When the thread is caught in the hook or any other sewing trouble occurs, the safety mechanism will automatically operate to prevent the machine from being damaged.

Excellent operability and maintainability.

- The stitch length can be easily selected by the stitch dial. The machine's enhanced operability features include a clear view of the area around the needle, placement of the bobbin thread winder on the front face of the machine arm, and a large handwheel (160mm).
- A knee-lifter mechanism is built in the bed. This reduces the pressure required to operate the knee-lifter and facilitates setup.
- The machine's full-open-type top design makes adjusting works easier.
- The machine comes with a lubricating mechanism that uses a centralized oil wick. This substantially reduces the time and trouble required for oiling the machine. (Hook: automatic.)
- A walking foot mechanism is built into the machine arm to prevent oil from scattering

1-needle, Unison-feed, Lockstitch Machine with a Large Hook and an Automatic Thread Trimmer

DNU-1541-7

DNU-1541-7-0B/XC-E500* XC-E500 control panel is optionally available.

The vertical stroke of the walking foot and presser foot can be easily set and changed.

The vertical stroke of the presser foot and walking foot (amount of alternating vertical movement) can be easily changed with the large dial mounted on the top of the machine head. The sewing speed is automatically regulated based on the vertical stroke setting. This ensures ideal sewing conditions at all times.

Thread trimming without fail.

A helpful automatic reverse feed function is provided as standard.

Consisting only of a moving knife and counter knife, the simple and well-balanced thread trimming mechanism is capable of cutting thick thread up to without fail.

With just a light press on the one-touch type reverse feed button, reverse feed stitching is actuated. Furthermore, if a suspended ruler is attached on the machine or a 3-dimensional sewing product is sewn, the button can be shifted upward to prevent interruption.

The area around the needle entry is designed to be easily observed.

Since the needle thread tension-release solenoid is fitted on the rear face of the machine head, the area around the needle entry and one-touch type reverse feed button is easily viewable. This substantially contributes to improved operability.

Instantaneous change-over device for the alternate vertical movement amount (DL device).*

Model name	21. 1	Remarks
DNU-1541-7	GDL-21000DA0	[DL21 (D kit)] for installed after the setup of the machine

- For sewing processes that handle heavy-weight materials or multi-layered parts of material, the alternating vertical movements of the walking foot and presser foot can be quickly set to maximum by pressing the DL switch.
 The result is beautiful seams free from gathered stitches.
- The machine is provided with both a hand switch and knee switch.
- *The DL device cannot be used alone. It is designed for use in combination with the auto-lifter (AK123B).

Suspended ruler H152

Part No. MAH-152010A0 SS-7151610SP × 2 WP-0621016SD × 2 WS-0610002KN × 2

3-pedal unit PK75

Part No. GPK-750000A0 (for DNU-1541-7) Highly operable 3-pedal unit for standing work.

AC servomotor/controller SC-380

The SC-380 is provided with many different standard functions, including speed-control, soft-start, automatic reverse stitching with the specified number of stitches, constantdimension stitching, and overlapped (multi-layered) stitching. These functions ensure sewing performance optimally suited to the material and process.

Control panel that improves functions of the sewing machine (optional)

The XC-E500 is provided with program sewing and a host of other functions that contribute to increased efficiency.
