Large rotary hook and top and bottom feed greatly boost efficiency in sewing heavy materials

Hohe Leistungssteigerung bei der Verarbeitung von schweren Materialien dank dem großen Greifer und dem Ober- und Untertransport

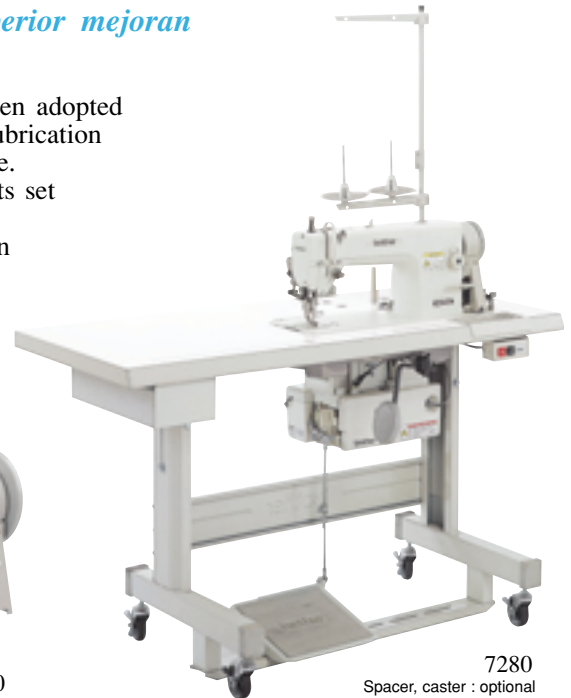

Le grand crochet rotatif et l'entraînement supérieur et inférieur augmentent considérablement le rendement de la couture des tissus épais.

El garfio giratorio grande y la alimentación inferior y superior mejoran mucho la eficiencia en la costura de materiales gruesos.

- An automatic lubrication system that takes oil from the oil pan has been adopted (other than the upper feed mechanism). This greatly reduces troublesome lubrication work and also increases the sewing machine's durability and reduces noise.
- A dial lock lever prevents the feed adjustment dial from moving from its set position under all sewing conditions.
- The working space available around the needle drop area has been increased. This allows curved articles such as shoes and bags to be handled much more easily.
- An adjustment pin for adjusting the forward and back stitch length allows fine adjustments to the material feeding. So, attractive sewing finishes with uniform stitch lengths can be obtained.
- The high-performance thread trimming mechanism ensures constant and stable trimming quality (7280).
